Product Description

CAS 872728-81-9 Dabigatran Etexilate Mesylate (Pradaxa Mesylate) Powder

Dabigatran etexilate mesylate, also known as Pradaxa, is a medication used to prevent blood clots from forming in the body. It is a type of blood thinner that is commonly used to prevent venous thromboembolism (VTE), which is a blood clot that develops in a vein, most often in the leg or thigh. It can also be used to treat VTE if it already exists. In addition, Dabigatran etexilate mesylate is used after hip or knee replacement surgery to prevent blood clots from forming in the legs or lungs.

Dabigatran etexilate mesylate belongs to a class of drugs called direct thrombin inhibitors. It works by blocking the action of thrombin, an enzyme that is involved in blood clot formation. By preventing thrombin from working, dabigatran etexilate mesylate helps to prevent blood clots from forming.

Product Name	Dabigatran etexilate mesylate powder
CAS Number	872728-81-9
Assay	99%
MF	C34H41N7O5CH4O3SC8H15NO2
Appearance	White to off-white solid
Melting Point	178~183°C

Dabigatran etexilate mesylate is available in capsules and as a powder for oral solution. It is usually taken once daily, but the dose may be adjusted depending on the individual's needs.
